Robe at LDI 2016

Robe is ready to rock the LDI 2016 expo at the Las Vegas Convention Center October 21-23 on Booth 1715 where the featured product will be the new Spiider LED wash beam luminaire – the next big thing – from Robe, which has just been launched worldwide!

Much anticipated, the Spiider has received a fantastic reaction, and it will be the visual centerpiece of the large booth with a special lightshow running at the top of each hour.

Bob Schacherl, CEO of Robe America comments, "We are extremely pleased with how well the North American market continues to embrace our brand. Lighting designers have been very complementary on the performance of our luminaires and the rental companies are thrilled with their reliability. It doesn't get much better than that! We look forward to introducing our clients to the latest Robe innovations at LDI 2016".

Robe lighting s.r.o CEO Josef Valchar confirms, "Spiider is really something special that everybody will love! Forty-two Spiiders will be in action on the Robe booth – which is an absolute 'must-see'!"

Also new is the **Halo**, an ingenious new Robe LED 'pixel technology' device that can be used to transform PAR cans and add new and different dimensions to stage and TV sets.

Additionally, highlighted is Robe's new **Spikie**, a small, super-fast LED wash beam ideal for multiple applications.

The full Robe North America and International teams will be available at booth 1715 which will present another special eye-catching environment for this year, with a design inspired by classic Broadway street scenes.

Spiider

This is a brand new and totally unique LED wash beam luminaire.

It builds on the extreme success of Robe's best-selling 'industry standard' LEDWash series ... with completely new concept and optics.

It has one super bright 60W RGBW LED multichip in the middle which is surrounded by 18 x 30W RGBW LED multichips in an intricate optical design that resembles a spider web.

It is also so much more than just a wash!

It can be used as a beam and - a first for LED wash light stage luminaires - it has an eye catching flower effect.

The zoom is an impressive 4 - 50 degrees, and the light output is outstanding, offering more than 50,000 lux at 5 meters.

Spiider has all the great features making Robe's LEDWash series such a well-respected industry standard, including virtual color wheel, tungsten lamp emulation, individual pixel control, built-in

wireless DMX on request and much more.

The Halo

Robe's Halo brings a new and exciting pixel technology approach to stage and set lighting.

The product is a circle of bright encapsulated micro-pixel LEDs that is mounted on a standard PAR 64 sized color frame bringing a completely new dimension to these classic lighting fixtures, enabling them to be incorporated into lighting and set designs in new and different ways.

Numerous looks and effects can be produced with the DMX controlled Halo which can be simply and quickly programmed with a wide range of very straightforward to highly complex eye-catching effects. The Halo System comprises six frames of RGB LEDs and a 6-way data controller / driver in the familiar color-scroller format which fits neatly and securely onto the front of the light.

Halos can also be used as stand-alone products ... without any PAR cans – the unit is light and flexible enough to be rigged in a number of different configurations.

Speed, color and fade times can be altered individually or simultaneously making it exceptionally dynamic.

The industry standard 4-pin XLR scroller connector cables will already be part of many lighting rental company's inventories.

The Robe Halo is currently available in an RGB version and underlines Robe's commitment to develop customized and innovative and niche products alongside its signature ranges.

Spikie

Spikie is a new small, super-fast LED WashBeam, which utilizes a single 60W RGBW light source with a specially-designed 110mm wide front lens producing a nice solid beam.

The fixture quickly zooms from a soft wide 28° wash to a tight sharp-edged 4° beam ... or one of two new stunning air effects.

The dynamic Flower Effect creates sharp multicolored spikes of light, rotating in both directions at variable speed. Additionally, a unique Beam Effect Engine transforms the output into a dynamic ray of three narrow beams, bringing a totally different visual enhancement to any show.

Continuous rotation of the pan and tilt brings a new dynamic to the stage, and weighing just 16 lbs, Spikie is very compact and can be hung anywhere.

The Czech brand will also be offering its famous hospitality and fully embrace the spirit of invention and imagination synonymous with the exhibition.
